

Pakistan Economic Indicators Dashboard (2016–2026)

- This dashboard tracks CPI inflation, the PKR/USD exchange rate, and SBP's policy rate over a 10-year period, sourced from SBP's Easy Data portal. Inflation and the exchange rate both spiked sharply during Pakistan's 2022–23 economic crisis — inflation peaked near 35–38% while the rupee depreciated from roughly 150 to 280 against the dollar. In response, SBP raised its policy rate to a high of 22%, holding it there before gradually cutting rates as inflation eased through 2024–2026.
